Introduction

Scope

The purpose of the Release Note is to document the new functionality provided by the release and any known issues or limitations.

The release notes will also record any administrative instructions that are specific to this release and not recorded elsewhere.

For more information view the WebHelp which includes Installation Guides, Quick Start Guides, Release Notes for previous versions, and more.

System Requirements

These are the version combinations that have been tested:

Supported Software

Name/Version	Notes/Caveats
ArcGIS Pro 3.4, 3.5, 3.6	

The Add-in is not compatible with Versions of ArcGIS Pro older than 3.4.

Compatible 1Spatial Software

1Data Gateway	2.16.2, 2.16.3

 © 2026 1Spatial Plc.

Release Details

This is a major release of 1Data Gateway for ArcGIS Pro for general availability.

Notable Features

- Allow uploads of Selected Features
- Sign in to 1Data Gateway

New Features

Note: For a full list of new features prior to version 2.1.1, please see our online Release Notes.

ID	Description
AGDG-73	Ability to run on selected features
AGDG-78	Sign in to 1Data Gateway

Bugs Fixed

Note: For a full list of bugs fixed prior to version 2.1.1, please see our online Release Notes.

ID	Description
AGDG-131	Cannot open 1Data Gateway settings page in ArcGIS Pro 3.4.3
AGDG-129	If the ArcGIS 2D system style is removed from the ArcGIS Pro project, an error message appears, because the push pin symbol cannot be found (see notes)

Known Issues and Unresolved Bugs

None

Deprecated features

Support for ArcGIS 3.3 is removed in 1Data Gateway for ArcGIS Pro version 2.1

Notes

The add-in uses the symbol "Push Pin 2" from the system style "ArcGIS 2D" to render non-conformance features. If this system style is removed from the ArcGIS Pro project, now a simple triangle symbol is used (AGDG-129).

When uploading data in 1Data Gateway for ArcGIS Pro, the fields managed by ArcGIS will receive the standard names used in File Geodatabases, that is *ObjectdID*, *Shape_Area* and *Shape_Length*. These may be different from the original names, depending on the type of data source being loaded. If this is not accounted for in the specification, these fields will often be shown as unmapped attributes. Any unmapped attributes can be rectified during Schema Mapping, and it is possible to save the mappings applied so that this is avoided in future submissions.
