Introduction

VertiGIS Data Gateway for ArcGIS Pro is an Add-in which calls VertiGIS Data Gateway.

Scope

The purpose of the Release Notes is to document the new functionality provided by the release and any known issues or limitations.

The Release Notes will also record any administrative instructions that are specific to this release and not recorded elsewhere.

For more information view the WebHelp which includes Installation Guides, Quick Start Guides, Release Notes for previous versions, and more.

System Requirements

These are the version combinations that have been tested:

Supported Software

Name/Version	Notes/Caveats
ArcGIS Pro 3.4, 3.5, 3.6, 3.7	

The Add-in is not compatible with versions of ArcGIS Pro earlier than 3.4.

Compatible VertiGIS Software

Data Gateway Portal (formerly 1Data Gateway)	2.16.3, 2.17.0, 2.18.0

© 2026 1Spatial Plc.

Release Details

This is a major release of VertiGIS Data Gateway for ArcGIS Pro for general availability.

Notable Features

- Prompt removal of temporary files to improve security.
- VertiGIS rebrand.

New Features

Note: For a full list of new features prior to version 2.3.0, please see our online Release Notes.

ID	Description
AGDG-160	Prompt removal of temporary files to improve security
AGDG-165	VertiGIS rebrand

Bugs Fixed

Note: For a full list of bugs fixed prior to version 2.3.0, please see our online Release Notes.

ID	Description
AGDG-155	Wrong type and colour used in some Schema Mapping alerts

Known Issues and Unresolved Bugs

None

Deprecated features

The button to open the temporary folder is no longer available.

Notes

The add-in uses the symbol "Push Pin 2" from the system style "ArcGIS 2D" to render non-conformance features. If this system style is removed from the ArcGIS Pro project, then a simple triangle symbol is used.

When uploading data with VertiGIS Data Gateway for ArcGIS Pro, the fields managed by ArcGIS will receive the standard names used in File Geodatabases, that is *ObjectdID*, *Shape_Area* and *Shape_Length*. These may be different from the original names, depending on the type of data source being loaded. If this is not accounted for in the specification, these fields will often be shown as unmapped attributes. Any unmapped attributes can be rectified during Schema Mapping, and it is possible to save the mappings applied so that this is avoided in future submissions.

© 2026 1Spatial Plc.

When a submission input has multiple linked data stores of different types, only the parameters of the data store of type File Geodatabase are configurable from VertiGIS Data Gateway for ArcGIS Pro.
