Introduction

Scope

The purpose of the Release Note is to document the new functionality provided by the release and any known issues or limitations.

The release notes will also record any administrative instructions that are specific to this release and not recorded elsewhere.

Release Notes for previous versions are available online.

For more information visit our WebHelp which includes Installation Guides, Quick Start Guides, worked examples and more.

Purpose of Release

This is a minor release that includes some new features to satisfy the requirements of our customers, like the import and export of project configurations.

System Requirements

Supported Operating Systems

OS	Notes/Caveats
Windows Server 2016-2019	
Linux 64 bit	

Supported Databases

PostgreSQL	12.6 or later
Oracle	19c R1 or later
MS SQL Server	2019 or later

Supported Browsers

Google Chrome	115
Microsoft Edge	115
Mozilla Firefox	115

Other Pre-requisites

1Integrate (required)	4.1.x
Java RE	11 64bit

 © 2023 1Spatial Plc.

Release Details

Notable Differences

- Support for 1Integrate v4.1
- Change Datastore Type

New Features

Note: For new features added in previous versions, please see our online Release Notes.

ID	Description
DG-2211	Schema Mapping: prompt user to save
DG-2235	Upload one of a set of Datastores
DG-2431	Cache Map Viewer Configurability
DG-2495	Show CRS value from the datastore in the upload screen
DG-2515	Submissions tab filter out deactivated projects/specifications/assignments
DG-2563	Add Notification option to project default automation mode
DG-2604	Indicate submissions started via API in the submissions list
DG-2607	Add a REFRESH button to the ACCOUNT EVENTS screen
DG-2638	Extend map report tab to show error reports

Bugs Fixed

Note: For bugs fixed in previous versions, please see our online Release Notes.

ID	Description
DG-2586	Project import count doesn't increment past one
DG-2618	Empty notification modal is displayed when backend not available
DG-2683	Long task name not wrapped or truncated

Known Issues and Unresolved Bugs

ID	Description	Workaround
DG-2747	Long task name not wrapped or truncated on config screen	Place spaces in the name so it can be truncated properly

Changes to ClamAV Docker deployment

The 1datagateway-clamav Docker image in releases prior to 2.10 included a full installation of the ClamAV virus scanner. In 1DG 2.10 the Docker image only includes the clamdscan client program. The intended method of using ClamAV with 1DG 2.10 and later releases in a containerized deployment is to run clamd in a separate container. The 1DG clamdscan client can be configured to use the remote clamd instance as its virus scanner engine. The Helm charts published by 1Spatial provide an example of how this can be implemented.
