1 Introduction

1.1 Scope

The purpose of the Release Note is to document the new functionality provided by the release and any known issues or limitations. The release notes will also record any administrative instructions that are specific to this release and not recorded elsewhere.

1.2 Purpose of Release

A standard maintenance release of 1Integrate for ArcGIS, Desktop Edition

A well-planned implementation of this release will minimise disruption to a live environment. Read these Release Notes thoroughly before installation.

For users of previous versions, 1Spatial recommends the following before applying any changes to your live environment:

- Please read these release notes and the Installation Guide for the required edition of 1Integrate for ArcGIS before installing this release
- Ensure no users are using the 1Integrate for ArcGIS installation
- As a precaution, back up your rules and actions
- Test the release on your test platform

1.3 System Requirements

Before proceeding with your installation, ensure you have met the system requirements and installed all necessary Esri applications.

Other prerequisite software versions can be used (e.g. newer browser versions), but support requests will only be progressed if the issue can be replicated on one of the supported versions.

Operating System	Windows 7 or 10
Java Runtime Environment	JRE 1.8.0 update 141 or 211, 64-bit
Visual C++	Visual C++ Redistributable Packages for Visual Studio 2013 (available from the Microsoft website)
Browser	One of the following: • Chrome version 70 or newer
	Mozilla Firefox version 39 or newer
	Internet Explorer version 10 or 11

2 Release details

2.1 Notable differences in 1Integrate for ArcGIS 2.0.0

- Support for ArcGIS Desktop 1.6.1 (1.4 no longer supported for this release)
- Support for ArcGIS Pro 2.3 and 2.4
- Ability to write rules against topology system classes node, edge and face
- New built-ins for getting the rule name, copying attributes between features, and returning the location of duplicate vertices, kickbacks and self-intersections
- Other fixes and improvements

2.2 Previous releases

2.2.1 Notable differences in 1Integrate for ArcGIS 1.6.1

- Bug fixes for ArcGIS Pro including errors during commit being hidden which resulted in user not being aware of partial commits
- Improvements to commit speed in ArcGIS Pro

2.2.2 Notable differences in 1Integrate for ArcGIS 1.6.0

- New generate_UUID built-in
- Metadata service runs off SQL Server database
- Support ArcGIS Pro 2.0 (older versions of ArcGIS pro are not supported by this release)
- Requires Java 1.8 (Check the upgrade instructions below to ensure the correct version of Java is being used).
- This release does not yet provide support for ArcGIS 10.3.1, please speak to 1Spatial support if you require support for ArcGIS 10.3.1
- A number of built-in functions have been added
- Separate release notes for Desktop Edition and Server/Mobile Edition

2.2.3 Notable differences in 1Integrate for ArcGIS 1.5

- (from 1.5.011) Performance improvement for writing data in Desktop Edition.
- Widget and Add-in control improvements: Warn user and disable rules which don't apply to current data.
- Widget control improvements: Enable all rules by default and remember rules selection for next session (per Windows user for desktop, per browser for Web).
- Support for ArcGIS 10.5
- Support for Geometric Network data
- Several user interface improvements to improve rule author efficiency and clarity
- Licensing allow machines to change network and enable licenses that work in virtual environments such as VDI. Old licenses should continue to work but to use the new licenses then first delete the license then delete the hardware_hash files in C:\Users\cusername>\Documents\hash\ before starting

the 1Integrate for ArcGIS services. This will generate a new hash from which a new license can be created.

3 Special upgrade instructions

3.1 Java 1.8

This version of 1Integrate for ArcGIS requires Java 1.8 on the machine. Note that if Java 1.7 also exists on the machine (e.g. if upgrading from a 1Integrate for ArcGIS version 1.5 or older) then the 1Integrate for ArcGIS Windows services may not start if the installation continues to use the 1.7 version of Java. To check which version of Java is being used by the services, check the Windows registry using the regedit application: Go to "HKEY_LOCAL_MACHINE" -> "SOFTWARE" -> "JavaSoft" -> "Java Runtime Environment", select "CurrentVersion" and set the value to be 1.8, then close regedit and restart the 1Integrate for ArcGIS Windows services.

3.2 Licenses

Existing product licenses will continue to work with this new version. If you have pre v1.5 licenses but need them to handle changing the machine's network then first delete the hardware_hash files in C:\Users\<username>\Documents\hash\ before starting the latest 1Integrate for ArcGIS services. This will generate a new hash from which a replacement license can be re-created by 1Spatial support.
