

Agile Software Product Manager

Location:	Cambridge, UK (Currently home based due to pandemic restrictions, hybrid model of working available upon return to normal circumstances)
Employment Type:	Full time, Permanent
Salary:	Competitive, details will be made available upon first contact

In every sector, organisations are using location data to make better decisions – improving services, maximizing efficiency and even saving lives. 1Spatial's suite of solutions help our customers manage their complex geospatial data. We are a rapidly growing global business with offices in Cambridge (UK), France, Australia, USA, Ireland, Belgium and Tunisia.

1Spatial's product platform development team is responsible for developing its core LMDM software components and APIs that are deployed on-premise and on the cloud. These allow customers to bring the power of our patented no-code rules engine to their geospatial data, delivering automated data validation, cleaning, integration and transformation.

These products integrate with many open source or commercial technologies, both as data sources such as Google Big Query, Postgres databases or Esri ArcGIS and also as platforms or frameworks such as open source Wildfly, Oracle Weblogic application server or many other libraries and frameworks.

The applications are primarily built using Java on top of a C and C++ core using popular UI frameworks like React (and previously Angular) for the user interface to our no-code rules engine.

Would you be a good fit for the 1Spatial Product management team? We are looking for an experienced Product Manager to guide our high-performing development team to deliver our product strategy and goals and to provide product expertise to help the sales and marketing teams produce product collateral and demonstrations.

As a Product Manager, you will work with our consultants, customers and users to understand their needs, and how these needs can be turned into requirements. You will communicate the goal and requirements to the development team and work with the team to deliver. You will own the team's backlog, prioritising product and solution features and planning the releases.

The successful candidate will have great communication skills to work with development teams as well as others inside and outside the organisation. They will be able to support their team with their vision and understanding of our market, our customers and our business.

Required Skills and Experience:

- Proven experience in working as a Product Manager or similar role in software development
- Experience in enterprise data management systems
- Strong understanding of technical needs from pre- to post-sales
- Excellent technical and non-technical communication skills
- Experience of agile development (e.g. Kanban, Scrum)

Desired Skills and Experience:

- Experience and familiarity with the following would be great:
 - GIS (Geographic Information Systems)
 - Agile development workflow tools (e.g. JIRA)

What we can offer

 Competitive salary	 Free car parking
 Flexible working hours	 Easy rail access
 25 days annual leave	 Soft drinks and fruit
 Generous company pension scheme	 Cycle to work scheme
 Group income protection scheme	 Active social programme
 Private health insurance	 Health Cash Plan
 Buying/selling annual leave	 Personal Development Allowance
