

Agile Software Product Manager

Location: Cambridge, UK (Currently home based due to pandemic restrictions)

Employment Type: Permanent

In every sector, organisations are using location data to make better decisions – increasing profits, maximizing efficiency and even saving lives. 1Spatial's suite of solutions help our customers manage their complex geospatial data. We are a rapidly growing global business with offices in Cambridge (UK), France, Australia, USA, Ireland, Belgium and Tunisia.

1Spatial's mobile applications development team is responsible for developing targeted mobile applications. These allow customers to streamline the capture and use of spatial data whilst on the move. The applications are built on our in-house SDK, using Xamarin Forms, for mapping and spatial data validation.

We are looking for an experienced Product Manager to guide our high-performing mobile applications development team to deliver our product strategy and goals and to provide product expertise to help the sales and marketing teams produce product collateral and demonstrations.

As a Product Manager, you will work with our customers and users to understand their needs, and how these needs can be turned into requirements. You will communicate the goal and requirements to the development team and work with the team to deliver. You own the team's backlog, prioritising product and solution features and planning the releases.

The successful candidate will have great communication skills to work with development teams as well as others inside and outside the organisation. They will be able to support their team with their vision and understanding of our market, our customers and our business.

Required Skills and Experience:

- Proven experience in working as a Product Manager or similar role in software development
- Experience in native mobile or web mobile development projects
- Strong understanding of technical needs from pre- to post-sales
- Excellent technical and non-technical communication skills
- Experience of agile development (e.g. Kanban, Scrum)

Desired Skills and Experience:

- Experience and familiarity with the following would be great:
 - GIS (Geographic Information Systems)
 - Agile development workflow tools (e.g. JIRA)
